MM 720 | 16 Hours | \$650

MM 721 | 8 Hours | \$395

ENVIRONMENTAL MONITORING & ENVIRONMENTAL MONITORING LAB

See uta.edu/ded/eti for more course information and to register

- Environmental sampling is one of the primary methods of determining the effectiveness of controls.
- This class provides an overview of basic environmental monitoring techniques, including identifying when environmental monitoring is required; sampling techniques for air, water, and soil; sample handling, and review of documentation and more.
- The Lab course applies the principles presented in Environmental Monitoring course in a laboratory setting.
- During the Lab course, participants will explore the principles using environmental sampling equipment and case studies.
