

Flagger Training

Public Work Institute, University of Texas Arlington

The safety of the public and your work zone crews is the top priority. Learn how to set up and operate flagging stations that are both safe and effective. This training combines lectures, demonstrations, video presentations, and hands-on skill practice. This is a 4 hour class.

This course is intended for individuals who will be performing or engaging in flagging duties on construction/maintenance projects. The course will provide a better understanding of the importance and duties involved with flagging on a project.

- Upon successful course completion, students will receive a Qualified Flagger wallet card valid for a period of 3 years.

Flagger Train the Trainer

This course was established to certify individuals to teach “Qualified Flagger” training, as specified by Texas Department of Transportation 2014 Standard Specification Items 7 and 502. After successful completion of this course, including physical demonstrations and teach-backs demonstrating teaching skills, the student will be equipped to train “qualified flaggers” within their own organizations. This is an 8 hour class.

This course is designed to prepare contractor representatives to present the 4-hour Flagger Training course to employees wishing to become qualified flaggers.

In addition to basic training in fundamental concepts of work zone traffic control and flagging, adult training techniques will be presented, discussed, and demonstrated.

Upon successful course completion, students will receive a Certified Instructor for

- Qualified Flaggers certificate, which will be valid for a three-year period. This certificate permits the student to train qualified flaggers within their own organizations in accordance with the TxDOT requirements.

Traffic Control Supervisor

Public Work Institute, University of Texas Arlington

This 16 hr. course is geared to those who supervise traffic control technicians and other personnel in roadway work zones and is intended to familiarize supervisors with procedures used to make decisions regarding work zone traffic control. Course meets TxDOT Special Provision to Item 7 standard for Contractor Responsible Person and Alternate. This is a 16 hour class.

COURSE CONTENT INCLUDES

- Designing a series of traffic control plans that meet TMUTCD requirements
- Procedures for conducting inspections of the traffic control set up
- Treatment procedures for pavement edge drop-offs
- Considerations for day and nighttime work zones
- Importance of proper record keeping
- Review of basic communication strategies for improved worker performance

Upon successful course completion, students will receive a certificate of completion and 1.6 CEUs from UTA's Public Works Institute.
